 Models |  Paper |  Blog |  Twitter

EvoLLM-JP-v1-10B is an experimental general-purpose Japanese LLM. This model was created using the Evolutionary Model Merge method. Please refer to our [report](#) and [blog](#) for more details. This model was produced by merging the following models. We are grateful to the developers of the source models.

- [Shisa Gamma 7B v1](#)
- [WizardMath 7B V1.1](#)
- [Abel 7B 002](#)

 Usage

Use the code below to get started with the model.

► Click to expand

🔗 Model Details

- **Developed by:** [Sakana AI](#)
- **Model type:** Autoregressive Language Model
- **Language(s):** Japanese
- **License:** [MICROSOFT RESEARCH LICENSE TERMS](#) (due to the inclusion of the WizardMath model)
- **Repository:** [SakanaAI/evolutionary-model-merge](#)
- **Paper:** <https://arxiv.org/abs/2403.13187>
- **Blog:** <https://sakana.ai/evolutionary-model-merge>

🔗 Uses

This model is provided for research and development purposes only and should be considered as an experimental prototype. It is not intended for commercial use or deployment in mission-critical environments. Use of this model is at the user's own risk, and its performance and outcomes are not guaranteed. Sakana AI shall not be liable for any direct, indirect, special, incidental, or consequential damages, or any loss arising from the use of this model, regardless of the results obtained. Users must fully understand the risks associated with the use of this model and use it at their own discretion.

🔗 Acknowledgement

We would like to thank the developers of the source models for their contributions and for making their work available.
